

Step 1: Make Project Folder Example 'HelloWorld'

Step 2: Open it on Terminal

Step 3: hit command : npm init and fill all details

Step 4: install electron by: npm i -D electron
(-D is for development option)

Step 5: replace in package.json > scripts> "test": "echo \"Error: no test specified\" && exit 1" with "start": "electron ."

Step 6: edit index.js as

```
const { app, BrowserWindow } = require('electron')

let mainWindow
const createWindow = () => {
  mainWindow = new BrowserWindow({
    title: "Vaibhav Mojidra Electron JS Hello World",
    width: 500,
    height: 600,
  })// to create window
  // mainWindow.loadURL(`file://${__dirname}/app/helloworld.html`)// to load local
file window using file://
  mainWindow.loadFile('./app/helloworld.html')// to load local file window using
file://
}

app.on('ready', createWindow)
```

Step 7: add the following meta tag to html files:

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta http-equiv="Content-Security-Policy" content="default-src 'self'
'unsafe-inline' ">
  ...
</head></html>
```
